Assignment

- A car service shop needs to keep track of the records of services they provide to their customer. Create a system for them so they could keep ATLEAST the below records:
 - Date the customer visited
 - Services performed (at least 2 different services)
 - Parts changed (at least 2 different parts)
 - Payment (method & amount)

- The purpose is to practice OO concepts we learnt – don't focus on features, put your time on defining objects.
